68 kg

🔍 CBC (Complete Blood Count)

HB

● Normal 12.5

Normal: 12-15 g/dl

MCV

● Normal 87.75

Normal: 80-100 fL

RDW

● Normal 13.6

Normal: 11.5-15 %

WBC

● Normal 9000

Normal: 4000-10000 cells/mcl

PLATELET COUNT

● Thrombocytopenia

Normal: 400 x10³ cells/mcl

IRON DEFICIENCY ANEMIA

● Normal None

Normal: None

📄 AI Medical Report

Current Medical Status & Analysis:

The patient, Sarah Ahmed, is a 30-year-old woman in her 24th week of pregnancy, with a moderate risk state. Her average blood pressure is 122/80 mmHg, and her average random blood sugar is 110 mg/dl, which is slightly elevated. Laboratory results show a normal complete blood count (CBC) with the exception of thrombocytopenia, indicated by a platelet count of 150,000 cells/mcl, which is actually within the normal range, suggesting a potential error in the lab result interpretation. The patient's risk profile indicates a moderate risk for pregnancy complications, with a confidence level of 89.7%, based on the Nabd AI Model.

Future Action Plan:

The patient should be closely monitored for any signs of pregnancy complications, and her blood sugar levels should be managed to prevent gestational diabetes. The patient's platelet count should be reevaluated to confirm the accuracy of the lab result. Additionally, the patient's urine tests and other vital signs should be continuously assessed to ensure a healthy pregnancy outcome. Regular prenatal check-ups and screenings are essential to identify any potential issues early on and provide appropriate interventions.
