OCR TEST READING MODEL

Output →

{

test_name:"",

confidence:"",

test_values

'CBC (Complete Blood Count)'	'Urinalysis'
'HbA1c (Sugar Test)'	'TSH (Thyroid)'
'Ferritin'	'Blood Group'
'HBsAg (Hepatitis B)'	'HCV (Hepatitis C)'
'Fasting Blood Glucose'	

- CBC TEST

Response body

```
{
  "test_name": "CBC (Complete Blood Count)",
  "confidence": "0.95",
  "HB": 12.5,
  "RBCs_Count": 5.2,
  "MCV": 87.75,
  "MCH": 27.2,
  "MCHC": 32.8,
  "WBC": 9000,
  "lymphocytes": 31,
  "platelet_count": 150000
}
```

Download

- Urinalysis

Response body

```
{
  "test_name": "Urinalysis",
  "confidence": "0.96",
  "Color": "amber yellow",
  "PH": 5,
  "Specific_Gravity": "1030.0",
  "Protein": "nil",
  "Glucose": "nil",
  "Ketones": "nil",
  "Blood": "trace",
  "RBCs": "6-8",
  "Leukocytes": "8-10",
  "Nitrite": "Not Extracted"
}
```

Download

- ## TSH

Response body

```
{
  "test_name": "TSH (Thyroid)",
  "confidence": "0.94",
  "TSH": 10.1
}
```

Download

- ## Ferritin

Response body

```
{
  "test_name": "Ferritin",
  "confidence": "0.94",
  "Ferritin_value": 365
}
```

Download

- ## Fasting Blood Glucose

Response body

```
{
  "test_name": "Fasting Blood Glucose",
  "confidence": "0.95",
  "FBG": 245
}
```

Download

- ## HbA1c

Response body

```
{
  "test_name": "HbA1c (Sugar Test)",
  "confidence": "0.94",
  "HbA1c": 4.5
}
```

Download

- ## Blood Group

Response body

```
{
  "test_name": "Blood Group",
  "confidence": "0.95",
  "ABO_Group": "B",
  "RH_Factor": "+"
}
```

Download

- ## Hepatitis B

Response body

```
{
  "test_name": "HBsAg (Hepatitis B)",
  "confidence": "0.95",
  "HBsAg": "reactive"
}
```

Download

-

- **Hepatits C**

Response body

```
{
  "test_name": "HCV (Hepatitis C)",
  "confidence": "0.94",
  "HCV": "non-reactive"
}
```

Download

Test	Duration
CBC	Every 4 weeks
Urine	Every 4 weeks
Ferritin	Every 4 weeks
TSH	Every 4 weeks
Fasting blood glucose	Every 4 weeks
HgA1c	Every 3 Months
Blood Group	Just once start from the week 25
Hepatitis B	Based on Doctor Need
Hepatitis C	Based on Doctor Need

Conformation End Point:

- **Store IN: DataBase**
- **In Usual: Number: float, -1 OR Text**
- **Just for Positive / Negative Values**

Response body

```
{
  "error": "You Enter Invalid Values for Ketones"
}
```

Download

- Submit End Point

Input:

Json of Personal Information and Tests Results

```
{

"result_4": "Current Medical Status & Analysis:\nThe patient, Sara Ahmed, a 28-year-old in her 24th week of pregnancy, presents with a clinical profile indicating potential complications. Her average blood glucose level is elevated at 145, and her fasting blood glucose is significantly high at 245, which, according to the laboratory results, corresponds to a diagnosis of diabetes. The patient's blood pressure is 125/80 mmHg, which is within a relatively normal range but should be monitored closely given her gestational age and diabetes diagnosis. The risk prediction models indicate a high risk for gestational diabetes and an overall high-risk assessment with a confidence level of 94%, suggesting the need for immediate medical attention.\n\nFuture Action Plan:\nGiven the critical nature of Sara's condition, as indicated by her high fasting blood glucose level and the risk prediction models, the following steps are recommended:\n* Immediate consultation with an endocrinologist or a diabetes specialist to manage her blood glucose levels and prevent potential complications.\n* An oral glucose tolerance test (OGTT) may be considered to further assess her glucose metabolism, although her current fasting glucose level is already indicative of diabetes.\n* Lifestyle modifications, including dietary changes and physical activity, should be initiated under the guidance of a healthcare provider to help manage her diabetes and reduce the risk of complications.\n* Close monitoring of her blood glucose levels, blood pressure, and overall health status is crucial to ensure the well-being of both Sara and her baby.",
